

Myna

One inbox for every customer message — Instagram, Facebook, WhatsApp, TikTok & Viber — answered instantly by Maya, in the shop owner's own voice.

TEAM R1FTW • GATE 2

Meet Maya — the myna who learns your voice and speaks it back to every customer.

— THE PROBLEM, IN ONE NUMBER

**78% of customers buy
from the first business
that responds — and
82% expect a reply within
10 minutes.**

Lead-response & reply-time-expectation research, compiled in Gate 1 desk research (2026)

Methodology

Who we talked to, and why they matter for a Nepali SMB omnichannel-inbox product.

5

total interviews conducted across service verticals in Kathmandu

3 verticals

Retail/DTC (online sunglasses store), health/beauty (skin & aesthetics clinic), health (dental clinic)

+1 reference

Yodha Labs (IT company) as a supply-side reference point, not a target user

- **Who was targeted:** solo or near-solo Nepali SMB owners who personally handle all customer communications across Instagram, Facebook, WhatsApp, Viber and TikTok — the owner IS the entire customer-service team.
- **Split by design:** two interviews (skin clinic, dental clinic) stress-test the reply-accuracy/trust pillar; one (OglePeek) stress-tests the channel-volume/omnichannel pillar; the fifth reinforces that no automated assistant is in use anywhere in the sample.

Findings

Cross-interview patterns from the five-interview sample.

- **Zero delegation:** all owners personally handle communications — no system stands between them and the customer.
- **Universal after-hours pressure, coped with differently:** one grinds through backlog at 10 PM (dental), one draws a boundary but still caves (skin clinic), one built an internal tool (Yodha — not the target segment).
- **Two consistent adoption blockers:** trust/accuracy (fear of wrong medical or pricing info) and cost (a NPR 80,000 custom chatbot quote was rejected as too expensive).
- **Channel volume alone is already draining:** OglePeek's Instagram DM volume overwhelms one co-founder with no after-hours element required.
- **Estimated cost of the gap:** the skin clinic owner estimates 4–5 lost bookings per week from unanswered after-hours messages.

"Someone will message at 7 or 8 PM... by morning they've already called another clinic."

— SKIN & AESTHETICS CLINIC OWNER, LAZIMPAT

Synthesis

Nepali SMB owners are solo customer-service teams spread across five apps, with no way to monitor all of them, respond instantly, or reply consistently at scale.

"You've taken that responsibility." — the skin clinic owner explaining why he still checks messages after turning off his eSIM at 6 PM.

SKIN & AESTHETICS CLINIC OWNER, LAZIMPAT

One inbox, every channel, answered *instantly* and *in your own voice* — so no lead is ever lost to whoever replies first.

Who Exists

Tools that address pieces of the omnichannel-inbox-plus-auto-reply problem — none fit Nepal's micro-business context.

TOOL	ORIGIN / PRICING	CHANNELS	BUILT FOR
Sambad.io	Nepal-built, NPR 2,499–9,999+/mo	WhatsApp, Instagram, Facebook, TikTok, web chat, email	E-commerce/product brands with teams running paid ads
WhatsApp Business App	Free	WhatsApp only	Any business
WhatsApp Business API	\$49–99+/mo (BSP) + per-message	WhatsApp only	SMBs with technical capacity
ManyChat	Free (25 contacts) / \$15–29/mo — USD	Instagram, Facebook, WhatsApp — no Viber	Social commerce/marketing
Wati	\$49–279/mo — USD only	WhatsApp only	SMB team inboxes
Respond.io	From \$79/mo — USD only	WhatsApp, Facebook, Instagram, Viber, Telegram, web chat	Enterprise / multi-agent teams
Chatfuel	\$69/mo — USD only	Instagram, Facebook, WhatsApp — no Viber	Brands, agencies, e-commerce
Tidio	Free / \$29+/mo — USD only	Website chat, email, Instagram (limited)	E-commerce, website-first businesses

The Gap

T00L	KEY GAP VS. OUR SEGMENT
Sambad.io	Multi-user team inbox, not solo-friendly; order-placement focused, no owner-voice auto-reply layer; no Viber; effective cost often NPR 4,000–5,000+/month after free-tier auto-reply messages run out.
WhatsApp Business App	Static away-message only — cannot answer questions, capture intent, or triage urgency; single-channel, no automated replies.
WhatsApp Business API	Meta banned general-purpose bots from Jan 2026 — task-specific flows only; technical setup; still single-channel.
ManyChat / Wati / Chatfuel / Tidio	USD billing exceeds or nearly exceeds Nepal's NRB \$500/year personal dollar-card cap; wrong channel mix (no Viber, or no WhatsApp at all).
Respond.io	Best channel coverage of any tool, but \$948/year — nearly double the NRB cap — and enterprise/multi-agent complexity overkill for a solo owner.

No tool combines (1) affordable NPR pricing that respects the NRB forex cap, (2) true omnichannel coverage across Instagram, Facebook, WhatsApp, Viber (plus TikTok), and (3) a reply layer trained in the individual owner's actual voice, for a Nepali SMB of any vertical. The unoccupied space is the combination, not any single piece.

— THE SOLUTION

One inbox. Every channel. Answered in your voice.

Myna unifies Instagram, Facebook, WhatsApp, TikTok and Viber into a single threaded inbox, and drafts — or auto-sends — replies in the owner's own tone, escalating anything uncertain, high-value, or urgent straight to them.

- One-time setup teaches Myna the owner's tone, FAQs, and business info.
- Every incoming message, on any channel, lands in one place.
- Low-risk FAQ replies can auto-send; anything risky is flagged for the owner.

Unified inbox view across channels

A single scrollable list of every conversation across WhatsApp, Instagram and Facebook (Viber and TikTok shown as "coming soon"), with a channel badge and read/unread state per row — so the owner checks one place instead of five apps.

Maya-drafted replies in conversation view

Inside each thread, Maya's drafted messages are visually distinct from owner-sent ones, with an inline "Approve & send" or "Edit" action — the owner stays in control while Maya does the drafting.

Owner tone/FAQ setup

A one-time setup screen — business info, a tone selector (friendly / formal / concise), and an editable FAQ list — that trains Maya to reply the way the owner actually would.

Business setup
TONE, FAQs & CHANNELS

Business info

BUSINESS NAME
Himal Momo & Catering

HOURS
Every day · 10:00 AM – 8:00 PM

LOCATION
Patan Dhoka, Lalitpur

How should Maya sound?

FORMAL FRIENDLY

Currently: Warm & friendly

FAQs Maya has learned

Do you offer delivery?
Yes, free delivery within 5km, Rs. 100 flat fee beyond that.

What's the minimum order for catering?
Minimum 20 plates for event catering, booked at least 3 days ahead.

Do you have a vegetarian/veg momo option?
Yes — veg, chicken, and buff momo sets are all

Channel connect flow

Fake "Connect" buttons for WhatsApp, Instagram and Facebook with a success state; Viber and TikTok appear as "Coming soon" pills, reflecting their evidence status honestly rather than overclaiming scope.

Maya, the myna

A myna bird that literally learns the voices around it and speaks them back — the single most demo-able metaphor for something that replies in your voice. Restyled toward the merged brand's navy-and-brass system: deep navy/teal plumage, a brass-gold eye-ring signature, and a small clay/marigold chest-flash — so she reads as trusted infrastructure, not only a warm character.

- **Personality:** warm, clever, talkative, loyal, quietly premium.
- **Voice:** speaks in the shop owner's own tone — never robotic, always sounds like a person who knows the customer.
- **Role:** she's the face of the auto-reply feature — "never miss a lead, never sound like a bot."

Keywords & Tagline

CLUSTER A — THE TRUST BET

Never miss a lead

One inbox

Always-on

Reliable replies

System of record

CLUSTER B — THE HUMAN BET

Your voice, everywhere

Human warmth

Instant, personal

Sounds like you

Speaks your shop

*Never miss a lead. **Never sound like a bot.***

★ RECOMMENDED — TWO-BEAT CONSTRUCTION MAPPING CLUSTER A → CLUSTER B

MoSCoW

MUST HAVE

- Unified inbox view across channels — single scrollable list, channel badge/icon, read/unread state
- Maya-drafted replies in conversation view — distinct "drafted" vs. "owner sent" bubbles
- Owner tone/FAQ setup screen — business info, tone selector, FAQ list
- Channel connect flow (WhatsApp/IG/FB) — fake "Connect" buttons; Viber/TikTok shown as "Coming soon"

SHOULD HAVE

- Urgent-message flagging — red/amber flag on conversations Maya is unsure about or deems urgent
- Order/booking capture in-chat — a structured "booking card"/"order summary" inline in a conversation

COULD HAVE

- CRM/lead tracking — basic contact history or tags (e.g. "returning customer," "3 bookings")
- Multi-agent/team seats — a second "staff" avatar or assignment dropdown, shown but not deeply functional

WON'T (YET)

- Viber/TikTok integration — coming-soon pills only, no working demo screens
- Payment processing — no checkout, invoicing, or payment-collection flow
- Full CRM — no pipeline, deal stages, or reporting/analytics suite

Tech Stack

FRONTEND

React Native / Expo cross-platform mobile app for iOS and Android — or a simple responsive web app for the MVP demo.

BACKEND

A managed database + authentication service (e.g. Supabase) for user accounts, channel connections, and API management.

REPLY ENGINE

Conversational engine for drafting replies in the owner's voice, handling FAQs, and flagging urgent/uncertain messages for escalation.

DATA

Conversation history and business-context store — FAQs, tone settings, contact history — feeding both Maya's replies and future CRM features.

DESIGN

Figma for interface design, component system, and user-tested prototyping ahead of build.

Thank You

Myna — Never miss a lead. Never sound like a bot.
